

What It's About . . .

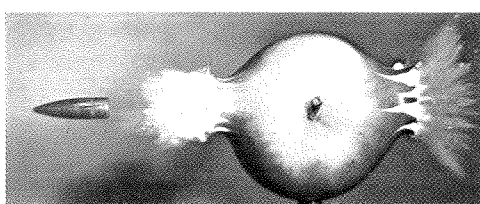

This is a show that children will never forget! Not only is it fun, but it makes sense of concepts children often misunderstand. Integrating magic, music, dance, film and involvement drama the show examines **WHAT'S GOING ON INSIDE**—to give children an understanding and appreciation of their bodies—and **WHAT'S GOING ON OUTSIDE**—to acquaint them with the increasingly scientific world in which they are living.

This show helps children to see science and its tools as a source of fun, excitement and participation—something that is all too often lacking in the public's image of science. It creates an atmosphere that is playful and exploring, one that is conducive to forming a curious and creative mind—the kind of mind that is necessary to enjoy the challenges of tomorrow.

Kevin Gormley . . .

Holds a Masters in Biology from the State University of New York. He has worked for the Health Department in Dutchess County for six years and has been performing science & health magic shows for the last five. Prior to this he taught high school for two years. This show is an outgrowth of his interests in the arts and sciences. He has danced with the Ulster County Ballet Company, has acted in dramatic productions and is a member of the Society of American Magicians. Mr. Gormley has fused these varied interests into a unique show which is an enjoyable learning experience for children and adults alike.

How is this photo like magic and how does it illustrate a scientific principle?

A few antibodies, germs and penicillin taking a well deserved bow.

What People Have Said . . .

"What a wonderful show. It had each and every student spellbound. Not only was it entertaining but the presentation included lots of solid facts and valuable information."

—Cheryl Anton, Supervisor, Spence School, N.Y. C.

"You gave a bravura performance as both performer and scientist. The program captivated all in the audience. The films, scientific data, humor and dancing were all top rate!"

—Seymour Goldstein, Principal, Camp Ave. School, N. Merrick, N.Y.

"Your performance was an exciting, educational experience for our students. Both students and faculty applauded your presentation enthusiastically. More of this type of programming is needed for school children today."

—Arnold Aromando, Ass't. Principal, Walter O. Krumbiegel School, Hillside, N.J.

"Mental Blocks" about science are disappearing rapidly at Rose Patania Elementary School, thanks to your performance! The delightful blend of magic and science captured the interest of all the students, from kindergarten to sixth grade, and left them with an increased perception of their relationship to science and its tools.

I thought that the analogies made through student participation, film, and visual aids between everyday objects and such concepts as germs, microchips, antibodies, and bodily functions were particularly well executed.

Thank you for a wonderful performance. I am looking forward to seeing you again at our school.

—Vicki Iguchi, PTA Cultural Arts Chairperson, Rose Patania Elem. School, Lincoln Park, N.J.
